FIFTH REPORT

OF THE

LINCOLN LUNATIC ASYLUM.

DURING the last session of Parliament two important Acts were passed, consolidating the whole of the existing law concerning Lunatic Asylums, and introducing a great variety of improvements for the prevention of abuses.

When the bills were first brought into Parliament, they contained a variety of clauses for the visitation and control of Public Asylums. These clauses were dropped in the progress of the bills through Parliament; and it has been the feeling of the Governors of this Institution, that this confidence so liberally placed in them by the Legislature, should be met by every possible exertion on their part to adopt the views of Parliament as far as applicable. It may

Inspection.

indeed be laid down as a principle in human nature, which experience will amply confirm, that no institution of this sort can be considered safe in its management, where the Managers are not subject to some eye unconnected with the government of the Institution itself. The public eye and public opinion have in all cases been found the most efficient: and the original Rules of this Institution, wisely and humanely acting upon this principle, court and avow a system of public inspection under due regulation. This same principle the Governors have now further pursued, by endeavouring to give additional facility to the observation of the state of the Patients and of the Institution, by all the respectable classes of society. At the same time they have opened a second entrance to the Asylum, by which they have prevented all persons approaching the house merely on business, from passing continually through the very midst of the Patients, in their principal exercise ground as heretofore: and have also taken means to prevent Strangers from addressing the Patients, or even making remarks in their presence, by placing them under the care of a responsible officer, while passing through the wards. Every opportunity is afforded to all who inspect the Asylum, to record any observations and suggestions they may think proper to make; and where, in any case, peculiarity in the disease may imperatively require privacy, the Director is fully authorized to prevent inspection in such

case; under this condition however, that he is required to lay all the circumstances of the case before the proper authorities without delay, in order to secure from abuse this hazardous though necessary discretion.*

The Governors have particularly directed their views to the subject of Coercion and Restraints, well aware of their injurious consequences to the Patients, and seeing from the late Parliamentary investigations on these points, the deplorable results which caprice, tyranny, negligence, and above all a wish to avoid necessary attention and trouble, have elsewhere produced. In order to ascertain the number and condition of the instruments in use for these purposes, instead of being dispersed in all parts of the house under the control of the inferior Keepers as heretofore, they are now collected in a single apartment, accessible at once, and open to inspection at any moment. In the next place, the Governors have adopted a Register universally used in the Scotch Asylums, wherein the Director is bound to enter the nature of every instance of restraint, and the time of its continuance, during the night as well as the day. And lastly,

Coercion.

* “ A Lunatic Asylum is unlike every other establishment for the care or confinement of human beings, in this respect, that the Patients are wholly incompetent witnesses, and too often that there is no direct mode of detecting any fault in their treatment, but through those who have an interest in concealing it.”

13th Report of the Glasgow Asylum, p. 9.

the construction of the instruments in use having also been carefully examined, they have destroyed a considerable proportion of those, that were not of the most improved and least irritating description, and hope hereafter to introduce still further amelioration into this department.

Divine
Service.

One of the Acts of Parliament alluded to, and various investigations before Parliamentary Committees, having shewn the strong feeling of the Legislature against a total neglect of religious duties in these establishments, the attention of the Governors has been further drawn to this point. The danger of excitement in all cases, and particularly of religious impressions in peculiar forms of insanity, are perfectly obvious. But it having been found by experience, that the periodical performance of divine service has been very beneficial to the Patients, as being in accordance with the former healthy habits of their minds, the Governors have been very desirous that portions of Scripture should be read to selected Classes of the Patients on the Lord's day ; a custom adopted with great benefit elsewhere, and not exposed to the danger of enthusiastic addresses, or the excitement of private conferences. The funds of the Institution however not being capable of affording the expense of a regular Chaplain, this wish of the Governors has not yet been carried into effect.

The new Act of Parliament requiring a considerable modification in the Forms hitherto used in the admission of Patients, these Forms have been altered accordingly and enlarged, and now embody almost every information, which can be required to facilitate this object. They have been extensively circulated among the Magistrates, the resident Clergy, and the Faculty of the County.—These Forms will also be found to exhibit an improved system of payments in advance on the admission of Patients, from which a greater regularity in the accounts of the Institution, and an increased convenience to the friends of the Patients, are expected to arise. In the statement of the terms of admission which they contain, it will be observed that a reduction has taken place in the rate at which the poorer patients may be received. The Governors feel much satisfaction in drawing the attention of the Public to this point, and would have experienced still greater pleasure in doing more in this way; but they are well aware that such a reduction as would lead to a false economy in the attendance upon the Patients, in their comforts, and especially in the nutritive and digestible qualities of their diet, could not fail to be attended with the very worst effect upon the treatment of the disease, and consequently be productive of vital injury to the main object and design of the Establishment.

Forms of
Admission.

Patients'
Accounts.

It remains only further to observe that the Governors, while attempting to introduce the utmost punctuality, accuracy, and economy, into the private accounts of the Patients, have not neglected the public accounts of the Institution : a Committee has for some time been appointed to arrange them, to class the papers and documents, and to form an improved system of book-keeping ; the whole details being, by the avowed principles of the Institution, open to the most minute investigation of each individual Governor.

Directions have been given for a regular Digest to be formed, of the several cases and their Medical treatment : a document on which, it is presumed, the medical character of the Institution, and its future utility, greatly depend.

The new Airing Grounds have been for some time in use, and with the new Buildings now in occupation, are found to conduce most essentially to the comfort of the Patients.

R. PRETYMAN, CHAIRMAN.

LINCOLN, 1829.

STATEMENT of ACCOUNTS

From the 1st January, 1828, to the 31st December, 1828, inclusive.
